

Hill's Healthy Weight Protocol morphometric measurement instructions – FELINE

Patient _____

Date _____

Age _____ Current weight _____

Hill's Healthy Weight Protocol results

BFI: _____

Ideal weight: _____

Accurate measurements are important to ensure accurate results. Measure as close as possible to skin surface. Measuring tape should be snug, but not so snug that it causes an indentation. Record in centimeters to one decimal point. Double check your measurements.

Record final measurements below. Enter data at HWP.HillsVet.com. Record results above and file with patient data.

6 FELINE MEASUREMENTS

Head circumference

Measure circumference by placing tape equidistant between eyes and ears at widest part of head.

_____cm

Front leg length

Measure from proximal edge of central foot pad to point of elbow (olecranon process). Carpus must be straight.

_____cm

Thoracic circumference

Measure the girth at the level of heart (~ 6th – 7th rib, just behind elbow).

_____cm

Hind leg length

Measure from proximal edge of central foot pad to tip of hock (dorsal tip of calcaneal process). Tarsus must be straight.

_____cm

Front leg circumference

Measure circumference at midpoint between carpus and elbow.

_____cm

Body length

Starting from base of tail measure along the dorsal midline following contours of back, neck and head to proximal edge of nose pad.

_____cm
